Guidelines on markdown, pandoc and how to build pdf files

Niklas Blomqvist, Robin Gustafsson

Contents

How to build the project (a md-file)

Just run

```
md2pdf <file name> [-spell]
# the -spell flag is optional, but enforces spell check
```

Useful snippets

Create several newlines (blank):

```
\vspace*{12\baselineskip} # creates 12 blank lines
```

Insert image:

```
!["Image text"](path/to/img.png, "Alternative text")
```

Write a snippet of code with color coding:

This:

````
```c
#include <stdio.h>

int main(int argc, char** argv)
{
    char world[5] = "world";
    printf("Hello %s", world);

    return 0;
}
```
````

Becomes:

```c
#include <stdio.h>

int main(int argc, char** argv)
{
    char world[5] = "world";
    printf("Hello %s", world);

    return 0;
}
```
